

## Company introduction/Case

Simx Initiative, Inc. (formerly Simx Corporation) has been collecting data from power receiving facilities in universities and research institutes and machine tools in factories for more than 10 years, and continues to provide a visualization service for power and machine operation.

### IEEE 1888 Edgecross IT Gateway

Edge device data acquired by various data collectors is sent to the cloud and other IEEE 1888 storage servers, enabling data collection and storage.

### Feature

- IEEE 1888 communication protocol is supported
- Effective for real-time data integration between the edge and the cloud
- The pulse mode makes it easy to process power data and convert pulse values to power values when transmitting to storage
